TREE CUT LENGTH TROLLEY

The Metalcraft Tree Cut Length trolley has been developed to assist Window Fabricators with the horizontal storage and movement of long cut length aluminium extrusions around factories. The size of the Tree is 1900mm long, 1800mm high, and 900mm wide.

THE COMPONENTS

Key components of the Metalcraft Tree cut length trolleys are :

1. The aluminium extrusions rest upon Metalcraft grey polymer extrusion. This is a soft, non-marking, hard wearing surface with a slightly raised centre which assists with damaging swarf rolling off the product and lessening the likelihood of scratches to the aluminium extrusions.
2. There are 6 layers of storage with two arms per layer allowing for both bulk storage, and for job lots to be easily identified and managed.
3. All Metalcraft trolleys use quality castors rated to the load of the trolley. This means that they have longevity and continue to provide smooth operation of the life of the product.
4. Metalcraft trolleys are fabricated in mild steel and hot dip galvanised, with end caps to hold the polymer in place for a neat and tidy solution.

USES FOR THE TREE CUT LENGTH TROLLEY

The Metalcraft Tree cut length trolley is a new product for the Window Fabrication Industry, which further extends Metalcrafts established range of trolley and factory handling products for the glass and window industries.

The Metalcraft Tree cut length trolley is designed for horizontal storage and movement of cut lengths which are too long for traditional vertical cut length storage and trolley systems. This trolley also suits applications where scratching and damage to cut lengths is more prevalent with vertical storage, such as heavier extrusions with wider flatter sections.

BENEFITS OF THE TREE CUT LENGTH TROLLEY

- This is a well designed, solidly constructed, NZ made, trolley
- The Tree cut length trolley is very space efficient for cut length storage
- The cut lengths are supported by Metalcraft grey polymer extrusion to protect the cut lengths from damage and scratching
- The Tree cut length trolley is quick and easy to load and unload from each side with reduced risk of scratching the cut lengths
- Multiple layers and arms simplifies storage and management of job lots
- Arms are slightly angled for greater retention
- Hotdip galvanising provides longevity
- The construction is strong and heavy duty for longevity
- The quality castors will continue to operate well under load for many years
- Construction is bolted together for ease of transportation and savings on shipping costs

TIPS FOR USE

When loading cut lengths into the trolley ensure that the lengths are placed at the inner most part of the arms. As more cut lengths are loaded they can be placed further out on the arms. This avoids double handling and reduces damage and scratching to the cut lengths

The Tree cut length trolley is supplied with two fixed and two turning castors. The trolley is most easily manoeuvred through a factory environment by pulling the end with the turning castors

The castors should be locked when loading and unloading

HOW TO PURCHASE

The Tree cut length trolley is a product that Metalcraft stocks in New Zealand, so is usually available either ex-stock or from units which are currently in production. For availability details and pricing please call either Ian Barker or Bryn Thompson 03-360-3373.
